

TIME NAVIGATOR FOR IBM iSERIES

Datasheet

Data Protection Solution

ADVANCED DATA PROTECTION SOLUTION

Time Navigator allows browsing through iSeries volumes to easily select and quickly recover data

With **Time Navigator Enterprise Edition for IBM iSeries**, Atempo delivers robust data protection for iSeries clients. Time Navigator Enterprise Edition provides a high performance, highly scalable and reliable data protection solution for OS/400.

Time Navigator for iSeries protects and recovers your mission critical or business critical data rapidly, consistently and reliably using any available tape drive within the enterprise. IBM iSeries users are now able to further maximize existing and future storage infrastructure investments, while realizing the benefits of Time Navigator's rich feature-set.

Time Navigator is the best approach to data protection for IBM iSeries customers and other enterprise end users because it reduces backup and restore pain through its ease of use and its centralized management of data protection across heterogeneous hardware platforms, operating systems, storage devices and applications. It delivers unparalleled data recovery performance, letting customers rapidly and securely recover files from any given point in time.

Time Navigator for iSeries can simplify and unifies you data protection architecture and will leverage you existing investments. No need to purchase expensive, high end storage devices.

FEATURES & BENEFITS

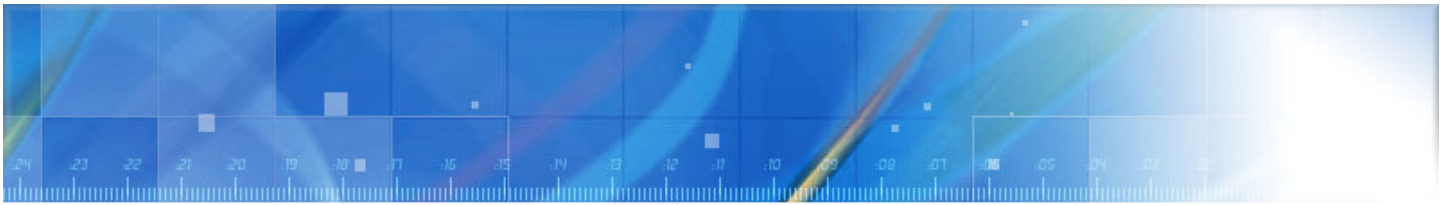

TIME NAVIGATOR FOR iSERIES ADVANTAGES

- **Advanced restore approach** using Atempo's unique **Time Navigation** brought to the iSeries world
- Enterprise class data protection solution **for heterogeneous environments**
- The **most OS agnostic** data protection solution available
- **Easy to use** administration interface enabling management of multiple remote backup systems
- Ability to leverage existing **non-proprietary storage devices**
- Ability to backup the iSeries **to disk then to tape (D2D2T)** for the most efficient backup architecture
- Advanced **reporting for monitoring** backup and recovery activities and performance
- Advanced **security** features

"Time Navigator is tailor made for IBM's iSeries systems. Atempo gives iSeries users a world-class data protection solution that is nimble and flexible because it works across multiple heterogeneous storage infrastructure. Firms can bring their iSeries applications into a common enterprise-wide data protection infrastructure,"

**John Quarantello, Manager,
IBM iSeries Solutions
Enablement**

FEATURES & BENEFITS

TIERED DATA PROTECTION

Time Navigator with its seamless integration of several backup technologies (snapshot, replication, D2D backup, tape backup, Archive) is the **most advanced tiered data protection tool**. Now, iSeries users can manage data protection between all storage layers from primary disk to archive media according to its lifecycle.

HIGH PERFORMANCE BACKUP TO DISK AND TAPE

Time Navigator protects data across **heterogeneous environments** and multiple storage architecture including DAS, NAS, SAN and IP Storage. The support of the OS/400 makes it the most OS agnostic data protection solution on the market. Its remote administration capabilities enable full backup and recovery from any location. Time Navigator offers the flexibility to backup to disk and tape for easy implementation of the optimal backup architecture. By using disk as a backup target, iSeries users can write and more importantly recover data very quickly with shorter backup windows.

ENTERPRISE SCALABILITY

Time Navigator easily scales from a single workgroup to thousands of enterprise nodes. Due to a significant set of programming tools customers can easily develop specific extensions to Time Navigator. There is no limitation to the number of parallel data streams, protected hosts, databases and drives which makes it the preferred solution for iSeries protection.

ADVANCED SECURITY

Time Navigator provides flexible deployment within secure firewalls environments without compromising network security. Advanced data encryption options ensure privacy of data transmitted over the network and security of backup media while the use of non proprietary tape format enables easier recovery in case of a disaster. Finally, access to the application is authorized or restricted by user profile, allowing multiple users to smoothly operate without any risk of error.

ARCHIVING MODULE

The Time Navigator archiving module is the natural add-on to Time Navigator's backup and recovery engine. This module provides a simple way to graphically select and classify sets of documents and data for long term archiving purposes. The data archived by Time Navigator is system independent and can be restored by any different system in the future. Through a central repository of folders, archive and keywords, the data can be easily retrieved on demand.

SUPPORTED CONFIGURATIONS

Time Navigator Version

- Time Navigator Enterprise Edition 3.7.0.4 and higher

OS/400 Version

- V5 R2, V5 R3

ABOUT ATEMPO

Atempo is a leader in data protection for information lifecycle management (ILM). Atempo's Time Navigator™ data protection suite delivers comprehensive data security and unparalleled recovery performance, allowing users to rapidly and accurately restore data from any given point in time. Time Navigator provides the infrastructure that enables enterprises to achieve their ILM objectives, including compliance with new regulatory requirements. Founded in 1992, Atempo has more than 2300 customers worldwide, with a sales and support network exceeding 100 resellers. The company's dual headquarters are in Palo Alto, Calif., and Paris, France.
